- Rowing machine
- Static bike (must have at least 100º flex)

Week 6 Goals:

- Full Ext
- 120° Flex
- Supple PF med-lat and sup-inf
- FROM
- No pain or swelling
- Strength within 80-90% of contralateral extremity (Quads & hams)
- Satisfactory eccentric control to perform 10cm step down with neutral pelvis

7-12 Weeks Rehabilitation:

- Progress to full ROM
- Gait Re-education
- Functional closed chain 10cm step ups 40º
- Progress proprioception:
 - Trampette double leg / single leg stand
 - Wobble board
- Treadmill slow walk
- ↑ Static bike/ordinary bike to tolerance
- Knee Ext 0 30^o in standing with resistance of theraband

3-Month Goals:

- Normal Gait
- Full AROM
- Good knee control
- Reduced swelling & pain

3 – 4 Months Rehabilitation:

- ↑ Functional training
- Treadmill fast walk
- Stepper/cross trainer
- ↑ Walking distance
- Patellofemoral rehabilitation
